

NLP—How to run my code

We can run these python notebook cells sequentially.

In order to access the train, test dataset and pre-trained word embedding model, we can directly download them by accessing my pydrive client (code given in notebook). Otherwise, we need to download the files to the same folder, where the notebook file resides.

Below is the list of packages used to execute the program

1. Keras – 2.2.4
2. Sklearn – 0.20.3
3. Numpy – 1.16.2
4. Pandas – 0.24.2
